ABSTRACT

A research project was conducted by the Council on Learning Assistance (CLAS) to gain a clearer understanding of the extent and nature of basic skills education in Washington's community colleges. During the study, course information and enrollment statistics for 1984-85 were solicited from CLAS representatives and deans of instruction in an effort to determine what percent of total instructional effort is devoted to basic skills/developmental education; whether the amount of effort varied from quarter to quarter; the number of students in one, two, or three basic skills courses; what percentage of basic skills enrollment is made up of reading only, writing only, reading and writing combined, and math; and what course numbering systems are used. Study findings included the following: (1) for the four quarters of 1984-85, 16.82% of the Washington community college system's full-time equivalent (FTE) enrollment was generated by basic skills classes; (2) basic skills enrollments increased significantly during the summer term; (3) campus student/faculty ratios ranged from a high of 64:1 to a low of 17:1, with an average ratio of 33:1; (4) 64% of the basic skills students were enrolled in one developmental course, 15% in two courses, and 21% in three or more courses; and (5) except for the summer quarter, the majority of students were attending full-time. Extensive appendices present enrollment, student characteristics, student/faculty ratio, and course numbering data for each campus and the system as a whole. (AYC)

PREVIEW

This report is the second report by the Council on Learning Assistance Services (CLAS) on the status of basic skills/developmental education in Washington community colleges.

The Council undertook this research because its members wanted a better understanding of the size and nature of basic skills education on their own campuses and in the state. Among the goals of the project were: a) gaining a clearer, more uniform definition of basic skills education, b) increasing campus and state awareness of basic skills education, and c) obtaining campus-generated data about the size, nature, students, and curriculum in basic skills education. By achieving these goals, CLAS believes it will be ready to tackle the questions of how many students entering colleges need basic skills classes, what assessment and placement systems are most workable, and what are effective methods of instruction in the basic skills.

The data used in this report represent enrollment statistics for summer, fall, winter, and spring, 1984-1985; and the analysis answers these questions: a) What per cent of total instructional effort in an academic year is devoted to basic skills/developmental education? b) Does the effort vary significantly from quarter to quarter? c) What are dominant characteristics of students in basic skills courses? d) In how many basic skills courses are most students enrolled? e) Of basic skills enrollment what percent is reading only, writing only, reading and writing combined, and math? f) What HEGIS Codes are used, what percent of total effort is coded outside the 2500 series, and what percent of the courses are numbered above 100?

The report is organized into these three sections: 1) explanation of method, 2) answers to each of the questions above, 3) conclusions and recommendations, and 4) appendix containing summaries of the data.

METHOD

After dissemination of the first report in May 1985, CLAS members discovered that some campuses wanted to revise the data they had submitted for fall, 1984; in addition, CLAS wanted to respond to the questions from the Instructional Commission relating to whether courses were predominantly reading or writing and how many courses defined "developmental" were numbered above 100. Consequently, in October all deans of instruction and CLAS representatives were asked to correct or confirm the courses they identified on their fall, 1984 SCS021 report, identify all basic skills/developmental courses for summer, 1984 and winter and spring, 1985, and indicate whether each English course was predominantly reading, writing, or a combination. This identification was done by each campus marking every course it considered basic skills/developmental on each of the quarterly SCS021 reports. When the CLAS representatives and deans of instruction were asked to identify the courses, they were given these criteria, which were agreed to by CLAS in August, 1984, to use in identifying Basic Skills/Developmental courses:

1. College preparatory and remedial courses in the areas of reading, writing, speaking, listening, study skills, math and other preparatory classes in subject areas below the 100 level.
2. ABE, ABE/ESL, GED, and adult high school classes.
3. Classes falling within the HEGIS Codes of 2501, 2510, 2520.
4. Non-college transfer or associate degree courses.
5. Preparatory courses for occupational/technical programs.

In early November, CLAS submitted the campus responses to SBCCE computer programmer and systems analyst Deralyn Gjertson who applied the programs developed for the previous CLAS research.

RESULTS

The results are reported in the following documents which may be found in the Appendix:

1). A1-A5, "Basic Skills As A Percent of Total Sections, Courses, and FTE'S," Report #BASICM2B for 1984-85: Summer, Fall, Winter, Spring;

2). B1-B4, "Basic Skills Courses and Credits for Students Taking At Least One Basic Skills Course: Summer, Fall, Winter, Spring, 1984-85," Report #BASICM1B;

3). C1-C4, "Student Characteristics of Students Taking At Least One Basic Skills Course: Summer, Fall, Winter, Spring, 1984-85," Report #BASICM1A;

4). D, Basic Skills Data CLAS Survey: FTEF/SF Ratios;

5). E1-E4, "Basic Skills Courses by Colleges: Annualized Four-Quarter 1984-85," Report #BASICM2A;

6). F, "Sections, Courses, FTE's 2500 Series;"

7). G, Summary of HEGIS Codes Used, 1984-1985;

8). H, Summary of Reading, Writing, and Math Enrollment.

System Totals. See Table A (page 4) for a summary of system totals. See Appendix A1-A5, page 12.

For the four quarters of 1984-85, 16.82% of the system's FTE's were generated by basic skills classes. Summer quarter saw a high for the year of 26.6%, with fall, winter and spring at 16.2%, 16.4%, and 15.1%, respectively. Colleges generating over 30% of their FTE's in basic skills classes were Spokane Falls (34.0%) and Seattle Central (32.4%). Three additional colleges generated 20% or more of their yearly FTE's in basic skills credits--Ft.Steilacoom (22.2%), Tacoma (23.1%), South Seattle (20.1%); and 10 additional colleges generated 15% to 19% in basic skills credits--Yakima Valley (18.1%), Walla Walla (18.1%), Skagit Valley (17.8%), Clark (17.7%), Edmonds (17.2%), Grays

2 Annualized '84-'85, SBCCE BASICM2A, 1/15/86; system total is for the 4 quarter average.

3 Annualized '84-'85, SBCCE BASICM2A, 1/15/86.

4 Fall, 1984 only, BASICM1B.

5 Fall, 1984 only, BASICM1A.

6 41 different HEGIS Codes used in the state; Fall, 1984 data.

Harbor (16.4%), Lower Columbia (16.3%), Centralia (15.8%), Columbia Basin (15.5%), and Everett (15.5%). In other words, more than fifty percent of the colleges generated 15% or more of their total FTE's in basic skills classes and all but four colleges generated 10% or more of their FTE's in basic skills education.

While a range of 10% to 30% for basic skills education may seem like a sufficient or even strong effort, we should consider this effort in light of SBCCE intern Sandy Wall's findings regarding assessment in our system. In fall, 1985 Ms. Wall surveyed all community colleges to find out how many used some form of assessment and how many used the results of assessment for placement. She learned that two-thirds of our colleges use some assessment, that one-third use the results for placement into English and math, and that 40% to 60% of the students do not place into English or math 101. If what is true for one-third of the system is true for the rest of the system, 50% of our students need at least one basic skills course; yet no college is generating FTE's in basic skills education at a rate that would serve 50% of the students.

Quarterly System Totals.

A surprising finding was the significant increase in basic skills credits in summer, 1984; 26.6% of the system's total FTE's were generated by basic skills education. No dramatic departures occurred for any of the other three quarters; as predicted, spring was the lowest with 15.1% and winter quarter was the second highest at 16.4%.

It should be noted that by giving campuses an opportunity to improve their reporting for fall, 1984 and by getting more careful reporting for all four quarters because of the system CLAS members used to assist one another, one finds an increased annual and quarterly per cent from that identified last spring--16.8% now as opposed to 15.1% in May, 1985.

Student/Faculty Ratio. See Appendix D, page 25.

Campus student/faculty ratios for the year ranged from a high of 64.4 at Spokane Falls to a low of 17.1 at South Puget Sound. These numbers also show a change from the first report. In 1984-85 the system average S/F Ratio was 32.9. Twenty-four campuses had S/F Ratio above 20, and of these 13 had ratios above 30. While the current funding for the basic skills cluster is at a ratio of 31 and next year will be at a ratio of 32 to 1, CLAS members and the faculty they represent continue to believe that student/faculty ratio must be lowered. Instead of lowering student/faculty ratios, the system seems to be driving itself upward.

In an attempt to see whether courses coded "continuous enrollment" might account for the increased ratio, CLAS asked Deralyn Gjertson to identify the number of courses coded as "continuous." She determined that the majority are coded "continuous" which means that end-of-the-quarter ratios may not reflect the actual ratio at any given point in the quarter. Yet final enrollment determines the system ratio for each cluster; hence, basic skills are funded at 31 students per faculty, an unrealistically high number if we expect one or two five credit classes to make significant differences in students' basic competencies.

Students In One, Two or Three Basic Skills Courses. See Appendix B1-B4, #BASICM1B, pages 17-20.

This discussion is based on fall, 1984 because headcount is duplicated across the three quarters. Over 18,000 students were in one basic skills course fall quarter, more than 4,000 were in two basic skills courses and 6,000 were in three or more such courses. This pattern of the majority of the students enrolled in only one class continued for all four quarters, but the number of students in two courses dropped significantly and then rose for three or more courses. The

total percents for fall, 1984 were: 64% of the students in one basic skills course, 15% in two such courses and 21% in three or more.

Student Characteristics. See Appendix C1-C4, #BASICM1A, pages 21-24.

Except for summer quarter, the majority of students were full-time, 17,316, as opposed to 11,408. In every quarter other than fall, there were more male than female students in basic skills classes. Sixty percent were full-time, 72% were white (20, 597) and 28% were minority with Asians, Hispanics, and Blacks comprising 90% of the minority students--4,231 Asians, 1,446 Hispanics, 1,307 Blacks. Only 369 foreign students were in basic skills classes in fall, 1984, and while there were 464 foreign students winter quarter, foreign students did not comprise a significant portion of the basic skills students in 1984-85. A major reason for the high number of Asian students is the inclusion of English as a second language classes in the category of basic skills education, but the dominant student characteristics are that they are white and full-time.

Basic Skills Courses By College and HEGIS Codes. See Appendices E, #BASICM2A and G, pages 26-90 and 93-102.

Most of the courses are in the 2500 HEGIS series; however, other frequently used codes are 1501, 1502, 1701, and some 2200, 5300, 5400, and 5600 series. Table B identifies every HEGIS code used and the number of courses at that code. While these results show that many HEGIS codes are still used to identify basic skills courses, one can be encouraged by the fact that the majority--73%--of basic skills courses are coded appropriately, the 2500 series. However it is discouraging to realize that more colleges have not recoded courses; it is also possible that some campuses mistakenly identified occupational and community service courses as basic skills.

Total # Codes outside 2500 series: 38. Total Courses outside 2500 series: 1334. Total courses within 2500's: 3625--2501: 1027 courses, 2510: 1253 courses, 2520: 1345 courses. Total Codes: 41. Courses: 4959 Percent of courses outside 2500's = 27%.

*** It appears that campuses erred in listing these courses as basic skills; with several of these codes only one campus identified the code and then often for one course.**

How courses are coded matters if the system is to determine S/F Ratio accurately and if the SBCCE is to obtain inclusive counts of the total basic skills effort. Currently, CLAS statistics show a greater number and percent of basic skills FTE's than SBCCE summaries because SBCCE uses only courses coded in the 2500 series. It will be impractical for CLAS to continue doing these studies; therefore, CLAS representatives and the deans of instructions will need to resolve how they want these courses coded. Perhaps the Instructional Commission will want to recommend that all basic skills courses get coded in the 2500 series or that SBCCE recognizes some or all of the additional codes used or that some other way is found to obtain an accurate summary of the effort in basic skills.

Reading, Writing, and Math. See Appendix H, page 103.

Using winter, 1985 only, CLAS attempted to discover how many students were enrolled in primarily reading as opposed to writing or a combination of reading and writing courses. In addition total effort in English (reading and writing) was compared to that for math. Campuses were asked to identify the focus of their English or language arts courses. While most campuses did this, some did not so the data is incomplete; furthermore this data had to be compiled manually and is, therefore, more subject to error. However, of those courses so identified, one finds that 12% of the students were in reading only, 20% were in writing only, and 38% were in reading/writing classes.

The effort in math in comparison to English is 30% for math and 70% for English (English includes ESL and ABE).

Thus, in answer to the Instructional Commission's question about how many students need reading rather than reading or writing, this data suggests that more of our basic skills classes in language skills teach both reading and writing that either skill independently and that there is significantly greater enrollment in English/ESL than math.

CONCLUSIONS AND RECOMMENDATIONS

1. Because we now have data about basic skills education for an entire year, CLAS recommends that 1984-85 be used as the base year for future comparisons.

2. CLAS has learned that 16.8% of the annual FTE's are generated by basic skills credits, that the majority of students in basic skills education are predominately full-time and in only one course per quarter, and that the student/faculty ratio is 32.9 or more than twice that recommended in Platform for Excellence.

3. The majority of the English classes identified as "developmental" teach both writing and reading and that 70% of the students in basic skills education are in English (reading, writing, or reading and writing) classes and 30% are in math classes.

4. The number of basic skills classes offered each quarter is relatively constant except for summer when the number is smaller but the percent of effort for the system is over one and a half times greater than that for fall.

5. Even though 16.8% of the FTE's are generated by students in basic skills classes and 18,277 students are in at least one basic skills class each quarter, CLAS members know that many more students in our colleges do not have sufficient English and math skills and knowledge to place into English 101; assessment indicates as many as half our students need some basic skills/development instruction.

6. This research effort has raised awareness among basic skills instructors on issues relating to course coding and reporting and has provided every campus with data about their own program and students which they can use for comparison, planning, and evaluation.

FUTURE DIRECTIONS

As a sub-commission of the Instructional Commission, CLAS looks forward to the Commission's response to this effort and suggestions for future projects. In addition to this project, CLAS is engaged in studying the student/faculty ratio--why there are such differences in student/faculty among the campuses, the use of instructional aides, ways of reporting enrollment and the impact on ratios, student and teacher evaluations of the effects of large classes, instructional methods that seem particularly effective with classes of 32 or more students, and the effectiveness of basic skills education for adults. Furthermore, CLAS has authored a statement about the need for a greater effort in basic skills education if the state wants to make a serious impact on adult illiteracy. Finally, CLAS has been involved in developing the proposal for a Joint Council on Assessment and expects to be an active participant of J.C.A.

Improving our methods of assessing and placing students into basic skills education, improving instructional effectiveness in basic skills classes, bringing our course coding into line with SBCCE definitions and systems of data collection, and increasing the funding for basic skills education remain primary goals of the Council on Learning Assistance Services.
